PREFACE

Within the framework of the observational program in physical oceanography which was executed during the International Geophysical Year of 1957–58, the Woods Hole Oceanographic Institution, Woods Hole, Massachusetts, in partial association with the National Institute of Oceanography, England, performed a methodical oceanographic survey covering most of the Atlantic Ocean. Supplemented with similar observations made in the western North Atlantic just prior to the IGY, the data obtained constitute a comprehensive new body of information pertaining to the circulation of the entire Atlantic. To summarize many of the observations in a particularly useful and efficient manner, as well as to perform a fundamental analysis upon them, the following atlas of Atlantic thermohaline structure has been prepared. Although distributions of other properties measured on these cruises might also have been depicted in this volume, it was felt that a more coherent and serviceable atlas would be produced if attention were concentrated exclusively upon temperature and salinity; the measurements of these two variables, moreover, are of consistent quality, since they were all made by a single small research group employing the same techniques and equipment throughout the survey period.

The most graphic and least ambiguous method of representing thermohaline structure described by survey data is to draw a series of profiles of temperature and salinity as functions of depth and ship track position. Spatial distributions in lines across entire oceans may then be seen at a glance. Although this method still involves much interpolation, and hence conceals many probable irregularities, nevertheless, the large number of observations and apparent gross regular behavior of the variables associated with these profiles preclude significantly erroneous interpretations of the data.

The surveys relevant to this atlas occurred between September, 1954, and July, 1959. The included profiles correspond to those ship track segments which were traverses of complete ocean basins. Of the zonal sections, twelve cross the entire Atlantic, while five are limited to its northeastern portion; of the meridional ones, two cut the western North Atlantic, and four others, the Caribbean.

The classical oceanographic station, involving serial observations from surface to bottom with reversing thermometers and Nansen bottles, was the principal source of thermohaline information. These station data were used to produce the profiles which extend over the entire depth of the ocean. The appropriate members of this set may profitably be compared with Wüst's profiles of temperature and salinity associated with sections run principally in the South Atlantic between 1925 and 1927 by the German Atlantic Expedition of the Research Vessel METEOR (Wüst and Defant, 1936). Such comparison provides dramatic evidence for the steady-state character of large-scale Atlantic Ocean dynamics.

Thermal structure was also probed during these cruises with the bathythermograph. Since this instrument is lowered from a moving ship, and produces a continuous record of temperature with depth through more than two hundred meters of water, it makes practical very much denser measurements of temperature in that upper layer than reversing thermometers could feasibly provide. Accordingly, in order to show in finer detail the surface layer structure associated with some of the above sections, this atlas presents for the first time transatlantic profiles drawn from bathythermograph data. Although many of the small-scale features of these particular profiles must be transient, it seemed worthwhile, nevertheless, to illustrate in this way the very complex character of the actual temperature distribution.

The cost of preparation and publication of this atlas was borne by a grant from the National Science Foundation, made in support of the International Geophysical Year Interdisciplinary Research Program. All data presented were collected under the personal supervision of L. V. Worthington, W. G. Metcalf, A. R. Miller, and F. C. Fuglister. G. G. Pasley, Jr. directed drafting and art work. The plotting and checking of the data were done by E. Soderland.

OBSERVATIONAL PROGRAM

In 1954, L. V. Worthington of the Woods Hole Oceanographic Institution began a survey of the western North Atlantic designed to repeat certain earlier stations and to determine in some detail deep and bottom water structure. His basic station pattern was a set of rays, diverging from Bermuda, which extended over the western basin of the North Atlantic from the coast of North America to the Mid-Atlantic Ridge. The work completed before the International Geophysical Year defined in the deep water a very precise correspondence between temperature and salinity, and, in the shallow levels, the region occupied by the 18°C. water (Worthington, 1959 a). This lenticular body, centered at a depth of 300 meters, and characterized by a temperature of 17.9 ±0.3°C. and a salinity of 36.5 ±0.1‰, is easily recognized on all profiles passing through the western basin of the North Atlantic, seaward of the Gulf Stream and north of the Antilles.

Only a few of the many stations made during this pre-IGY study have been used in the compilation of this atlas.

On these observations are based the meridional profiles along 50°W.; the meridional profiles along 66°W. exclusive of the portions between Bermuda and the Antilles; and the parts of the zonal profiles along 32°N., east of longitude 50°W. All the data taken by Worthington are to appear in the "Bulletin Hydrographique".

In the late winter and spring of 1957, F. C. Fuglister began the International Geophysical Year research activities of the Woods Hole Oceanographic Institution by performing a survey in the tropical Atlantic which became prototypic for Woods Hole's subsequent contributions to the IGY program in oceanography (Fuglister, 1957). On the Research Vessel CRAWFORD, Captain David F. Casiles, Fuglister ran three transatlantic sections along latitudes 8°N., 8°S., and 16°S. Continuous recordings of bottom topography were made, temperatures measured, and collected water samples analyzed for salinity, and concentrations of dissolved oxygen and phosphorus (inorganic as well as total amount). To perform a grand examination of the time-scale of gross oceanic processes, the two South Atlantic sections and the 24°S. and 32°S. sections made later during the IGY were run along the latitudes of METEOR Profiles IV, VI, VII, VIII. The distributions of temperature and salinity are virtually identical to those found over thirty years earlier (Wüst and Defant, *op.cit.*). In general, the very small differences found indicate that the water at mid-depths has become slightly cooler and more saline, while the Antarctic water on the bottom of the western basin has become slightly warmer and more saline than at the time of the METEOR Expedition.

Although the Mid-Atlantic Ridge is less conspicuous along 8°N. than on any other transatlantic section, a change in bottom water types across the Ridge is still apparent. This striking feature is associated with the presence much farther south of the Walvis Ridge, which prevents entry of deep Antarctic water into the eastern basin of the Atlantic. It is to be noted that here the Antarctic Bottom Water of the western basin is pressed against the Mid-Atlantic Ridge, in contrast to its concentration along the basin's western boundary in the South Atlantic.

Throughout this and the greater number of succeeding IGY cruises, bathythermograph observations were made hourly. All the bathythermograph data obtained are reproduced in this atlas, but profiles have been drawn only for those transatlantic sections along which stations were also made.

While this first CRAWFORD cruise was underway, the Royal Research Ship DISCOVERY II, Captain S. S. F. Dalgliesh, of the National Institute of Oceanography, crossed the Atlantic to join the ATLANTIS in the measurement of deep currents off the coast of South Carolina (Swallow and Worthington, 1957). Its return voyage to England started a new phase of the IGY survey, which exemplified notably the cooperative nature of IGY activities: American and British oceanographers, working on this vessel under the leadership of H. F. P. Herdman of the N.I.O., undertook a series of sections in the North Atlantic, beginning with one which ran from the southern tip of the Grand Banks of Newfoundland to the offing of the English Channel. Mr. Worthington participated on the cruise, because this 48°N. section contributed data of particular relevance to his continuing study of the western North Atlantic (Worthington, 1958). The associated profiles suggest the complexity of the flow pattern in the western portion of the section; from west to east one crosses in the surface layer the fresh cold water of the Labrador Current, the alternately warm and cold water of various currents, and finally the very marked temperature gradient associated with the Gulf Stream. The relatively high salinity values at 1000 meters in the eastern portion of the section are generally attributed to outflow from the Mediterranean Sea. These profiles suggest that some of this high salinity water may have been mixed down from the surface along the eastern boundary.

In October, 1957, the CRAWFORD and the DISCOVERY II started their second IGY cruises. The features of the 40°N. section, made by W. G. Metcalf on the CRAWFORD, resemble somewhat those of the 48°N. section, except that the deep water contrast between western and eastern basins is more marked (Metcalf, 1958). Again at 1000 meters near the eastern end of the section there is unmistakable evidence of Mediterranean outflow. Continuing its cruise, the CRAWFORD made a short run from the southern tip of Portugal west to longitude 18°W., and, turning south, another to latitude 24°N. These sections showed in further detail the spreading of Mediterranean water at a depth of 1200 meters but since they do not cross entire ocean basins, their profiles are not included in the atlas. The CRAWFORD finished this cruise in November by making the section from French West Africa to Guadeloupe along 16°N. The salinity profile displays the relative minimum at a depth of 800 meters which is a primary characteristic of the South Atlantic profiles previously discussed. Furthermore, the coldest bottom water is concentrated on the western side of the Mid-Atlantic Ridge, just as it is eight degrees southward.

When the DISCOVERY II undertook its cruise concurrent with the CRAWFORD'S, Mr. Worthington was again aboard, to assist with the section along 24°N. (Worthington, 1958). In these profiles the mid-depth salinity minimum prominent to the south has very nearly disappeared, and the 18°C. water is clearly apparent at a depth of 300 meters in the western basin. The undulatory

character of the isotherms and isohalines in the deep water near the western boundary may reflect deep currents. It is unfortunate that data of only one station point out the deepest of these troughs.

After Mr. Fuglister succeeded Mr. Worthington, the DISCOVERY II moved on in late November and early December to finish its trip by completing the 32°N. section, which had been begun in effect by Mr. Worthington on the Research Vessel ATLANTIS in 1954–55. Despite the three year time lapse, the profiles almost appear to represent a section made continuously. A curious feature of the section is the mass of relatively cool and fresh water found about 2000 meters below the surface at DISCOVERY II station 3628 (longitude 45°W.). At station 3631, on the Mid-Atlantic Ridge, the bottom water was found to be warmer and slightly more saline than that at the same depth on either side. Although no station was made on this section in the deepest rift in the Ridge, on the basis of data from station 3631, and from station 56 of the Research Vessel CHAIN, which was made in the deepest rift crossed at 36°N., it is inferred that these warmer, more saline conditions pertain also to the deepest rift at 32°N. Another point of interest here is that the concentration on the western side of the Ridge of water colder than 2.2°C., which was observed farther south and shown diminishing at 24°N., has developed only feebly at 32°N. No water as cold is found at all on the 36°N. section, nor does the meridional temperature profile along longitude 50°W. show water colder than 2.2°C. extending farther northward than latitude 35°N.

In accord with the IGY idea of repeating certain earlier surveys in order to study time-scales, as done in the South Atlantic with respect to the METEOR observations, Mr. Metcalf, in February, 1958, led the CRAWFORD on a new survey of the Caribbean Sea (Metcalf, 1959) to duplicate sections made by A. E. Parr on the Research Vessel ATLANTIS in 1933–34 (Parr, 1937). On the way he made a series of stations between Bermuda and the Mona Passage, i.e., the central portion of the 66°W. meridional section. The profiles show a wave structure in the deep water just north of the Antilles, which, combined with the similar structure seen in the 24°N. zonal profiles, suggests finger-like shapes in isothermal surfaces of the region. The temperature profile also displays the remarkable extent and continuity of the 18°C. water in the shallow layers of the western North Atlantic. In examining these 66°W. profiles, one should bear in mind that the portion of the section north of Bermuda was run in September, 1954, and that south of the Antilles, in December, 1954, so that a seasonal thermocline is associated with the northern part, but not with the rest; the deeper water, however, looks much the same on both sides of Bermuda. The outstanding features of these profiles, of course, are the differences between the waters inside and outside the Caribbean: below sill depth in the Caribbean all water is warmer than 4°C. and has a salinity greater than 34.96‰.

After reaching the Caribbean, the CRAWFORD made four meridional sections during February and March. The temperature profiles show very little variation between sections, including the one of the ATLANTIS already mentioned as the Caribbean extension of the 66°W. section; on the other hand, the salinity profiles show a gradual increase in deep water salinity from east to west.

At this time the IGY plans called for the ATLANTIS to go to the South Atlantic for a transatlantic section at 32°S., but engine trouble and other commitments made it necessary to postpone this cruise for a year.

Consequently, the next cruise was not made until August of 1958, when, again with Mr. Worthington's participation, the DISCOVERY II, Captain James Gray, ran four more sections in the North Atlantic (Worthington, 1959 *b*). These were confined to the eastern basin, because at that time the German ships GAUSS and ANTON DOHRN were performing in the same latitudes a thorough survey of the western basin. A concentration of cold, saline bottom water on the eastern side of the Mid-Atlantic Ridge is seen clearly on the 58°N. profiles, and also indicated somewhat on those for 53°N. The sections along 43°N. and 46°N. resemble the 40°N. and 48°N. sections. The slightly warmer bottom water at stations 3891 and 3878, which are about 150 miles apart on longitude 20°W., indicates the presence in this area of a deep isolated valley lying on a north-south line.

Mr. Metcalf took the CRAWFORD on its final IGY cruise in September, 1958 (Metcalf, 1960). Its first section, run along latitude 24°S. in October, corresponds to METEOR Profile Number VII, which was made in July and August, 1926. The slight differences in distributions are principally of salinity: the CRAWFORD found the minimum value at depth 700-800 meters to be a little lower than did the METEOR, and the 34.9‰ isohaline in the salinity maximum layer which is centered about depth 2400 meters extends farther eastward in the METEOR'S profile than in the CRAWFORD'S. Both pairs of profiles show Antarctic Bottom Water near the African as well as the American continental slope, because this section is so far south that it crosses the Walvis Ridge.

The other section on this cruise lay along the equator. CRAWFORD station 482, made on that occasion in the Romanche Trench, was the deepest station of the entire IGY survey, since its bottom bottle was 7020 meters below the sea surface.

In January, 1959, Mr. A. R. Miller took the ATLANTIS,

Captain Scott Bray, on the longest cruise of the series (Miller, *in prep.*), principally to make the postponed section along latitude 32°S. (Because Bray subsequently fell ill, Arthur D. Colburn, Jr. assumed the captaincy of the ATLANTIS in Rio de Janeiro; Eugene J. Mysona acted as captain for its return from Capetown to Woods Hole.) While *en route*, observations were taken for the profiles along 28°N. between the Mid-Atlantic Ridge and the Canary Islands. Comparison of this section with the ones for the eastern basin at 24°N. and 32°N. suggests that these deep water salinities may be too low. On its way south, the ATLANTIS also ran two short sections across the Brazil Current at 12°S. and 20°S.

The section along 32°S. is approximately of the mean latitude of METEOR Profile Number IV, made in November and December, 1925. The ATLANTIS experienced some difficulty on this crossing, for it was prevented by stormy weather from occupying as many stations as planned at the western end of the section, and, shortly after, on station 5810, the deep cast of bottles and thermometers was lost. When the vessel reached longitude 1°E., it discontinued stations, and ran for Capetown to pick up new thermometers, with which it completed the section on its return trip. The isohalines near bottom on the eastern end of the salinity profile have not been drawn strictly according to the curves of salinity *vs.* depth for the stations in question, because the author feels that the values associated with the bottom bottles at stations 5839, 5840 and 5841 are suspiciously high. If those values — printed on the profile — were correct, they would represent a unique situation in that the salinity of this bottom, Antarctic water would increase with depth. However, because double samples were taken and analyzed carefully, these anomalous observations cannot be disregarded.

While the ATLANTIS was in the South Atlantic, Mr. Worthington and Mr. Metcalf, aboard the Woods Hole Oceanographic Institution's recent acquisition, the Research Vessel CHAIN, Captain Wallace S. Olivey, made the section along latitude 36°N. which was compared earlier with the 32°N. section. On many of their stations, especially those in the eastern basin, they made exceptionally close measurements near the bottom. Two further points of interest in the profiles are the water of the upper thousand meters between 50°W. and 60°W., which is cooler and fresher than one might have expected from neighboring sections, and the eastern high salinity tongue, which again reflects outflow from the Mediterranean.

These cruises of the ATLANTIS and CHAIN concluded the survey of the Atlantic Ocean undertaken during the IGY period by the Woods Hole Oceanographic Institution and the National Institute of Oceanography. The foregoing brief chronology of this grand enterprise has been supplied to set a context for the observations upon which are based the principal contents of the atlas, the profiles of temperature and salinity; it is hoped, moreover, that the very limited running commentary on some of their features may have served as a guide to their detailed study and interpretation.

TREATMENT OF DATA

The oceanographic **station data** tabulated in this atlas consist of temperatures, bottle depths, salinities, station position, time of observation, depth of the ocean at the station, and slide number of the station bathythermogram. The temperatures were measured by means of deep-sea reversing thermometers and are regarded as accurate to ±0.01°C. The depths of bottles are based on readings of paired protected and unprotected reversing thermometers; (Sverdrup, Johnson, and Fleming, 1942) those members of a depth column marked with asterisks were determined directly in this fashion, the others interpolated. They are considered accurate within ±5 meters. With the exception of data obtained by Worthington, all calculated depths have been rounded off to the nearest five meters; no difference in method of calculation is implied, only of personal taste.

The salinities for ATLANTIS stations 5176-5202, given to one hundredth of a part per thousand, were determined by titration, and are accurate to ±0.02‰ (Sverdrup, Johnson, and Fleming, *ibid.*). Most salinities were measured on the Schleicher and Bradshaw salinometer (Schleicher and Bradshaw, 1956). The precision of a single measurement with this instrument is ±0.005‰ in the sense that the range about their average value of a large number of determinations on one sample would be ±0.005‰. All tests to date on this salinometer have shown that between 31.0‰ and 37.5‰ its accuracy is ±0.01‰, or better, and between 34.0‰ and 36.0‰, approximately equal to the precision, or ±0.005‰. While the accuracy outside the interval 31.0-37.5‰ has not been firmly established, determinations are not believed to be in error by more than 0.03‰ at 20‰ and 40‰. One should bear in mind that the accuracy of the conductivity method of measuring salinity is dependent upon the uniformity of composition of sea water, so that in regions where influx of river waters leads to low salinities, e.g. at CRAWFORD stations 180-183, measurements made with the salinometer may be subject to unknown errors. Since the sensitivity of the instrument is about 0.001‰, salinometer determinations are reported in this atlas to the third decimal place in order to take advantage of the fact that a large fraction of the measurements will lie well within the precision limits stated above. The improvement in salinity determination made possible by development of the conductivity bridge salinometer is most vividly seen by comparing the northern ends of the salinity profiles along 66°W. (titration) and along 50°W. (salinometer).

The station positions were obtained by celestial navigation and dead reckoning except in those cases for the western North Atlantic where Loran was available. The time given for each station is the date and Greenwich Mean Time at which the messenger was sent down on the first, or shallow, cast.

The depth given for most stations is the sonic depth read during the second, or deep, cast, adjusted for variations in sound speed in the ocean according to Matthew's tables of corrections (Matthews, 1944). The correction for topographic slope was considered negligible, so not made. Frequent checks insured a power supply to the recorder of steady frequency 60 cycles per second. Most given sonic depths are probably not in error by more than 1%. For those stations at which mud indicated that the deepest bottle had rested on the bottom, the thermometric depth of the bottom bottle is given as ocean depth.

All tabulated salinities and temperatures are measured values; none represent interpolations. Whenever an observation appeared to be seriously in error, because of pretripping or posttripping of bottles, malfunctioning of thermometers, evaporation of water samples, obvious blundering in making readings, or other easily discernible faults, the datum was omitted. If an observation looked suspect, but no reasonable source of error could be found, a question mark was placed beside the value.

The station numbers for the **deep profiles of temperature and salinity** based on these station data appear across the top of each profile and the latitude or longitude at 5° intervals along the bottom of the profile. The position of each observation is indicated by a black dot, which also serves as a decimal point for the numbers in small type. The depths of isopleths were plotted from curves of temperature and salinity as functions of depth, which were drawn for each station. Where space permitted, the maximum and minimum values for each station are shown, and also the maximum and minimum values along the surface. In all but the very shallow stations the deepest observed value is given. The heavy solid lines in the temperature profiles correspond to integral multiples of five Centigrade degrees, the light solid lines to whole degrees, and the dashed lines to multiples of two-tenths of a degree. The heavy solid isohalines represent multiples of one-half of a part per thousand; the light isohalines, tenths of a part; and the dashed isohalines, multiples of two-hundredths of a part. In the profiles of both parameters, four shades of two colors distinguish ranges of values.

The continuous bottom topography shown on these profiles is based on depth recordings made every fifteen minutes with the echo sounder. These depths, too, are probably accurate to 1%, although in regions of especially rough topography, the error may be greater. However, it is most likely that these profiles are displayed on a scale sufficiently small to render any depth errors of little consequence to the topography depicted; detailed bathymetry, after all, is not the subject of the atlas. For the few periods during which the echo sounder functioned improperly, e.g. between CRAWFORD stations 444 and 445 on latitude 24°S., bottom depth is estimated by simple linear interpolation. Such instances are fairly obvious on the profiles. Inserts on the equatorial and 66°W. profiles show two regions of depth in excess of six thousand meters: the Romanche and Puerto Rico Trenches, respectively.

The accuracy of the **bathythermograph temperatures** and depths presented in the atlas has not been exactly determined. Generally, when a bathythermogram has been adjusted to the bucket surface temperature, the indicated trace temperatures are considered reliable to ±0.2°C.

The technique, by which bathythermograph slides were reproduced for publication in the atlas, was devised by J. W. Stimpson of the Institution's reproduction department. (Fuglister, F.C. 1957.)

The vertical scale of the associated **surface layer temperature profiles** is expanded with respect to the horizontal scale by a factor of five thousand. In this case the bathythermograph traces themselves provided curves from which to read depths of isotherms. The solid line isopleths represent multiples of five Centigrade degrees; the dashed lines, multiples of one degree. The slide numbers are ranged along the tops of the profiles; five degree intervals of longitude are indicated along the bottom. On account of the complicated structure of the isopleths, no attempt was made to differentiate temperature ranges with color gradation.

Temp. 27.2

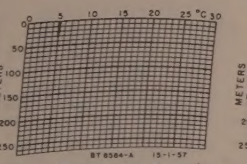
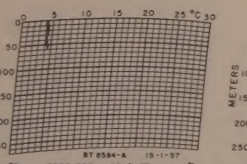
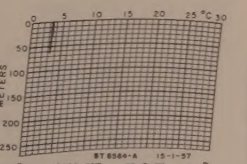
#1 2320 GCT 29.I.57 31/3
41°07.5' N 70°48.8' W
To — So —



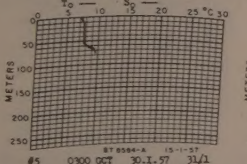
#2 0005 GCT 30.I.57 var/1
41°04.1' N 70°39.5' W
To 5.0 So 32.70



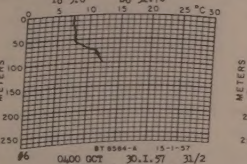
#3 0105 GCT 30.I.57 var/1
40°45.5' N 70°34.' W
To 4.4 So 32.44



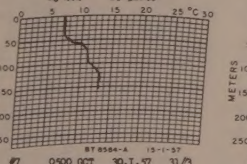
#4 0200 GCT 30.I.57 var/1
40°34.7' N 70°26.' W
To 3.5 So 32.42



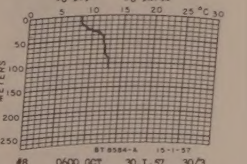
#5 0300 GCT 30.I.57 31/1
40°23.4' N 70°19.5' W
To 6.6 So 31.11



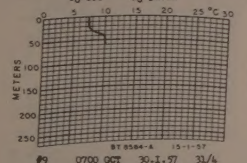
#6 0400 GCT 30.I.57 31/2
40°14.8' N 70°13.5' W
To 7.8 So 33.21



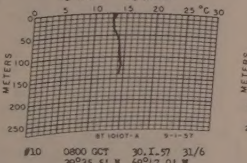
#7 0500 GCT 30.I.57 31/3
40°04.7' N 70°00.' W
To 7.6 So 33.21



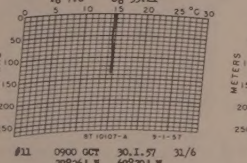
#8 0600 GCT 30.I.57 30/3
39°55.3' N 70°00.0' W
To 8.7 So 33.69



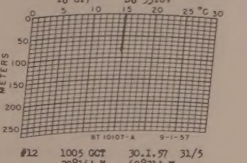
#9 0700 GCT 30.I.57 31/4
39°45.2' N 69°52.4' W
To 8.2 So 33.35



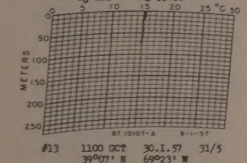
#10 0800 GCT 30.I.57 31/6
39°35.5' N 69°47.0' W
To 13.8 So 35.62



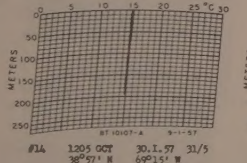
#11 0900 GCT 30.I.57 31/6
39°26.' N 69°39.1' W
To 14.9 So 35.90



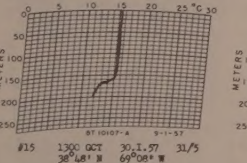
#12 1005 GCT 30.I.57 31/5
39°21.' N 69°31.' W
To 15.1 So 35.99



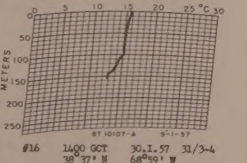
#13 1100 GCT 30.I.57 31/5
39°07.' N 69°23.' W
To 15.4 So 36.12



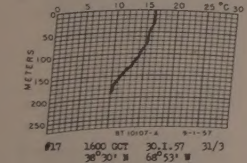
#14 1205 GCT 30.I.57 31/5
38°57.' N 69°15.' W
To 15.0 So 35.91



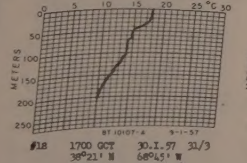
#15 1300 GCT 30.I.57 31/5
38°48.8' N 69°08.' W
To 15.5 So 35.93



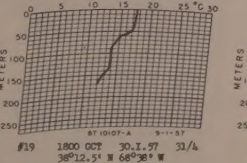
#16 1400 GCT 30.I.57 31/3-4
38°39.' N 68°59.' W
To — So 35.89



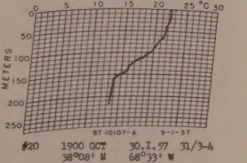
#17 1600 GCT 30.I.57 31/3
38°30.' N 68°45.' W
To 16.3 So 35.86



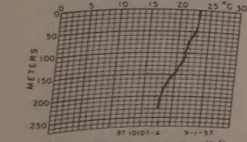
#18 1700 GCT 30.I.57 31/3
38°21.' N 68°45.' W
To 18.0 So 35.98



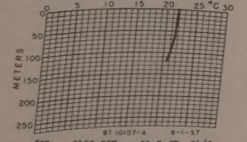
#19 1800 GCT 30.I.57 31/4
38°12.5' N 68°38.' W
To 17.9 So 35.94



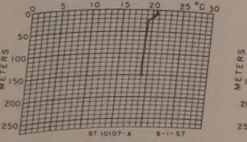
#20 1900 GCT 30.I.57 31/3-4
38°03.' N 68°33.' W
To 22.4 So 36.31



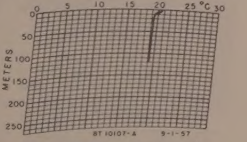
#21 2000 GCT 30.I.57 31/3
38°04.' N 68°29.' W
To 22.9 So —



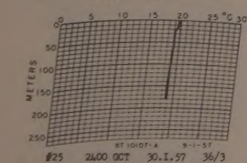
#22 2100 GCT 30.I.57 36/3
37°58.8' N 68°25.' W
To 22.1 So 36.29



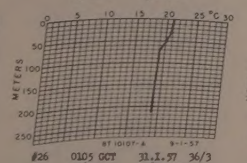
#23 2200 GCT 30.I.57 36/3
37°53.8' N 68°19.' W
To 21.7 So 36.46



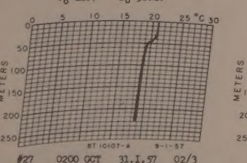
#24 2300 GCT 30.I.57 36/3
37°42.2' N 68°09.' W
To 19.8 So 36.50



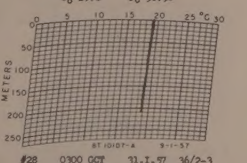
#25 2600 GCT 30.I.57 36/3
37°42.2' N 68°09.' W
To 19.8 So 36.50



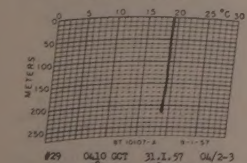
#26 0105 GCT 31.I.57 36/3
37°37.' N 68°05.' W
To 20.8 So 36.46



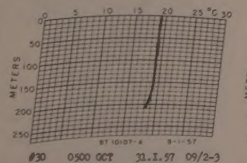
#27 0200 GCT 31.I.57 02/3
37°33.' N 68°01.8' W
To 20.6 So 36.44



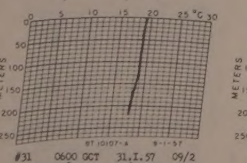
#28 0300 GCT 31.I.57 36/2-3
37°20.5' N 67°55.' W
To 19.3 So 36.52



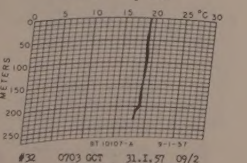
#29 0410 GCT 31.I.57 04/2-3
37°09.' N 67°49.' W
To 19.4 So 36.50



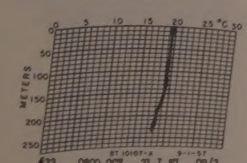
#30 0500 GCT 31.I.57 09/2-3
36°58.' N 67°43.5' W
To 19.3 So 36.50



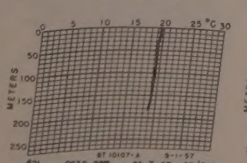
#31 0600 GCT 31.I.57 09/2
36°47.' N 67°34.' W
To 19.3 So 36.52



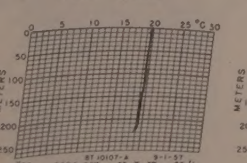
#32 0703 GCT 31.I.57 09/2
36°35.5' N 67°26.' W
To 19.3 So 36.54



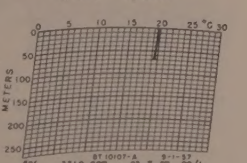
#33 0800 GCT 31.I.57 09/3
36°23.' N 67°17.' W
To 19.6 So 36.50



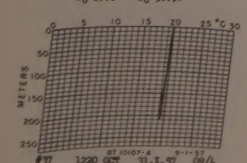
#34 0910 GCT 31.I.57 09/3-4
36°14.' N 67°12.5' W
To 19.8 So 36.51



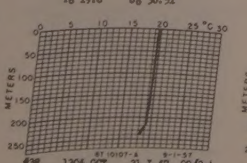
#35 1005 GCT 31.I.57 09/4
36°04.' N 67°05.' W
To 20.0 So 36.52



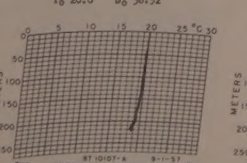
#36 1140 GCT 31.I.57 09/4
35°46.5' N 66°57.' W
To 19.9 So 36.51



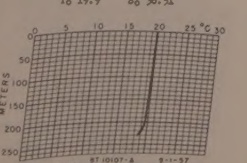
#37 1220 GCT 31.I.57 09/4
35°35.' N 66°37.' W
To 20.0 So 36.48



#38 1305 GCT 31.I.57 09/3-4
35°09.5' N 66°34.' W
To 19.8 So 36.51



#39 1400 GCT 31.I.57 13/3
34°51.5' N 66°22.' W
To 20.0 So 36.53



#40 1500 GCT 31.I.57 13/5
34°44.' N 66°18.' W
To 20.1 So 36.49

#41 1600 GCT 31.I.57 13/5
34°37.' N 66°12.' W
To 20.0 So 36.48

#42 1200 GCT 3.II.57 —
32°18.2' N 64°25.8' W
To 20.8 So —

#43 1300 GCT 3.II.57 —
32°14.2' N 64°14.0' W
To 20.8 So —

#44 1500 GCT 3.II.57 —
32°10.0' N 64°00.0' W
To 21.0 So —

#45 1600 GCT 3.II.57 —
32°05.8' N 63°48.2' W
To 20.9 So —

#46 1700 GCT 4.II.57 22/4
32°18.2' N 64°25.5' W
To 20.9 So 36.63

#47 1800 GCT 4.II.57 22/4
32°14.2' N 64°14.0' W
To 21.0 So 36.71

#48 1900 GCT 4.II.57 22/3
32°10.0' N 64°00.0' W
To 20.7 So 36.56

#49 2000 GCT 4.II.57 22/3
32°05.8' N 63°48.2' W
To 20.7 So 36.58

#50 2100 GCT 4.II.57 22/3
32°02.' N 63°36.' W
To 20.7 So 36.63

#51 2200 GCT 4.II.57 22/2
31°55.5' N 63°23.3' W
To 20.6 So 36.59

#52 2300 GCT 4.II.57 22/2
31°52.5' N 63°15' W
To 20.5 So 36.60

#53 2400 GCT 4.II.57 22/2
31°48.8' N 63°05' W
To 21.1 So 36.77

#54 0100 GCT 5.II.57 22/2
31°44.' N 62°50.5' W
To 23.1 So 36.77

#55 0200 GCT 5.II.57 22/2
31°39.5' N 62°38' W
To 22.1 So 36.76

#56 0300 GCT 5.II.57 22/2
31°35.4' N 62°25.9' W
To 20.7 So 36.69

#57 0400 GCT 5.II.57 22/2
31°31.5' N 62°13' W
To 22.4 So 36.79

#58 0500 GCT 5.II.57 22/2
31°26.8' N 62°00.5' W
To 21.6 So 36.80

#59 0600 GCT 5.II.57 22/2-3
31°22.0' N 61°47.8' W
To 22.2 So 36.82

#60 0700 GCT 5.II.57 22/2-3
31°17.8' N 61°35.0' W
To 22.0 So 36.80

#61 0800 GCT 5.II.57 22/3
31°13.0' N 61°22.1' W
To 22.2 So 36.80

#62 0900 GCT 5.II.57 22/2
31°09.0' N 61°10.0' W
To 22.1 So 36.80

#63 1000 GCT 5.II.57 22/3
31°05.0' N 60°59' W
To 22.0 So 36.83

#64 1100 GCT 5.II.57 22/2
31°00.0' N 60°49.5' W
To 22.0 So 36.83

#65 1200 GCT 5.II.57 22/2
30°56.0' N 60°38.0' W
To — So —

#66 1900 GCT 5.II.57 27/3
30°15.5' N 60°13.1' W
To 22.0 So 36.85

#67 2000 GCT 5.II.57 27/3
30°47.0' N 60°05.0' W
To 22.2 So 36.82

#68 2100 GCT 5.II.57 27/3
30°42.0' N 59°47.0' W
To 22.0 So 36.82

#69 2200 GCT 5.II.57 27/2
30°33.0' N 59°38.5' W
To 22.6 So 36.85

#70 2300 GCT 5.II.57 27/2
30°28.5' N 59°26.0' W
To 21.7 So 36.85

#71 2400 GCT 5.II.57 27/2
30°24.0' N 59°13.5' W
To 21.5 So 36.83

#72 0100 GCT 6.II.57 27/2
30°00.0' N 59°00.5' W
To 21.0 So 36.78

30°15.0' N 58°47.5' W
To 21.1 So 36.79

#74 0300 GCT 6.II.57 04/3-4
30°11.5' N 58°36.5' W
To 21.0 So 36.77

#75 0400 GCT 6.II.57 04/4
30°00.5' N 58°22.0' W
To 21.0 So 36.72

#76 0500 GCT 6.II.57 04/4
30°02.0' N 58°09.2' W
To 21.4 So 36.82

#77 0600 GCT 6.II.57 04/4
29°57.2' N 57°56.5' W
To 21.1 So 36.83

#78 0700 GCT 6.II.57 04/4
29°52.8' N 57°43.9' W
To 21.6 So 36.88

#79 0800 GCT 6.II.57 04/4
29°48.5' N 57°30.7' W
To 21.5 So 36.87

#80 0900 GCT 6.II.57 04/3
29°43.5' N 57°18.0' W
To 21.0 So 36.81

#81 1000 GCT 6.II.57 36/3
29°38' N 57°08.5' W
To 21.0 So 36.84

#82 1100 GCT 6.II.57 36/3
29°32.5' N 56°56.5'W
To 20.8 So 36.78

#83 1200 GCT 6.II.57 36/3
29°29.1' N 56°44.1' W
To 21.0 So 36.82

#84 1600 GCT 6.II.57 36/3
29°25.3' N 56°48' W
To — So —

#85 1700 GCT 6.II.57 36/3
29°33.3' N 56°58.1' W
To 21.8 So 37.01

#86 1800 GCT 6.II.57 02/3
29°20.1' N 56°23.7' W
To 22.0 So 36.99

#87 1900 GCT 6.II.57 02/3
29°17.2' N 56°13.2' W
To 22.4 So 37.00

#88 2000 GCT 6.II.57 02/3
29°13' N 56°00' W
To 23.5 So 37.00

#89 2100 GCT 6.II.57 02/4
29°10' N 55°47.1' W
To 21.5 So 36.91

#90 2200 GCT 6.II.57 02/4
29°07.5' N 55°34.5' W
To 21.7 So 36.93

#91 2300 GCT 6.II.57 02/4
29°04.1' N 55°20.1' W
To 22.7 So 36.97

#92 2600 GCT 6.II.57 02/4
29°01.' N 55°06.5' W
To 22.3 So 37.02

#93 0100 GCT 7.II.57 02/4
28°57.5' N 54°53.1' W
To 22.0 So 36.98

#94 0200 GCT 7.II.57 02/4
28°53.' N 54°41.' W
To 22.0 So 36.99

#95 0300 GCT 7.II.57 02/4-5
28°48.5' N 54°28.5' W
To 22.0 So 37.03

#96 0400 GCT 7.II.57 02/4-5
28°44.' N 54°16.' W
To 21.5 So 37.00

#97 0500 GCT 7.II.57 02/5
28°39.4' N 54°03.6' W
To 22.4 So 36.89

#98 0600 GCT 7.II.57 02/5
28°35.3' N 53°50.6' W
To 21.0 So 36.89

#99 0700 GCT 7.II.57 04/4
28°30.5' N 53°38' W
To 20.7 So 36.79

#100 0810 GCT 7.II.57 03/3
28°26' N 53°25.' W
To 19.5 So 36.82

#101 0900 GCT 7.II.57 04/3
28°21.5' N 53°12.5' W
To 20.8 So 36.83

#102 1000 GCT 7.II.57 04/3
28°11.5' N 53°04.' W
To 21.3 So 36.95

#103 1100 GCT 7.II.57 04/4
28°08' N 52°54.' W
To 21.6 So 37.02

#104 1200 GCT 7.II.57 04/4
28°04.' N 52°43.' W
To — So —

#105 1345 GCT 7.II.57 04/4
28°01.5' N 52°47.' W
To 22.0 So 37.08

#106 1700 GCT 7.II.57 04/4
27°58.8' N 52°36.5' W
To 21.6 So 36.88

#107 1800 GCT 7.II.57 04/3
27°55.3' N 52°25.4' W
To 22.7 So 37.18

#108 1900 GCT 7.II.57 04/3
27°52.5' N 52°09.2' W
To 22.5 So 37.08

#109 2000 GCT 7.II.57 04/3
